## **PROFESSIONAL SUMMARY**

Results-driven Web Developer with hands-on experience building production-ready websites, portfolio systems, e-commerce luxury brand interfaces, and interactive web applications using HTML, CSS, and JavaScript. Demonstrates strong capability in translating UI concepts into scalable, responsive, and deployment-ready applications.

Experienced in building brand-focused digital experiences, portfolio infrastructure systems, and interactive applications, with a strong emphasis on performance, responsiveness, and user experience design.

Currently engaged in multiple tech environments spanning web development services, logistics systems, and portfolio automation platforms, contributing to real-world engineering workflows and collaborative product development.

## **CORE TECHNICAL SKILLS**

- Frontend Engineering
- HTML5 (Semantic Architecture, SEO-ready structure)
- CSS3 (Flexbox, Grid, Responsive Design, Animations)
- JavaScript (DOM manipulation, interactive logic, UI behavior control)

## **Web Development Systems**

- Responsive UI Development (Mobile-first architecture)

- Static Site Deployment (Netlify, GitHub Pages)
- Component-based UI structuring (modular page design)
- Landing page engineering & conversion-focused layouts

## **Tools & Platforms**

- Git & GitHub (version control, repository management)
- Netlify (deployment pipelines)
- VS Code (development environment)
- LinkedIn & X integration for professional positioning

## **Soft Skills**

- Product thinking & UI structuring
- Technical problem-solving
- Independent system building
- Rapid prototyping & iteration
- Startup-oriented execution mindset

## **PROJECT PORTFOLIO (PRODUCTION & DEPLOYED SYSTEMS)**

### **1. Lydia Luxury Apparel – E-Commerce Luxury Brand Platform**

 GitHub: <https://github.com/MichaelFX-1/Lydia-Apparel.git>

 Live: <https://lydiaapparel.netlify.app/>

A premium fashion and luxury apparel brand website designed to simulate a modern e-commerce experience for high-end clothing materials and fashion textiles.

### **Key Contributions:**

- Designed luxury-grade UI system with premium aesthetic structure
- Built responsive product showcase architecture for apparel listings
- Implemented conversion-focused landing layout for brand positioning
- Structured visual hierarchy to reflect high-end retail branding standards

**Outcome:** A scalable luxury brand interface suitable for digital fashion commerce positioning.

## **2. POW Portfolio Template System (Version 1)**

 GitHub: <https://github.com/MichaelFX-1/Portfolio-Template-1>

 Live: <https://portfoliotemplate0.netlify.app/>

A portfolio generation system allowing users to select structured templates for showcasing personal work and professional identity.

### **Key Contributions:**

- Built multi-template selection interface concept
- Developed reusable portfolio layout architecture
- Designed UX flow for user-driven portfolio creation
- Structured modular HTML/CSS template system

**Outcome:** Early-stage portfolio-as-a-service concept enabling scalable personal branding systems.

## **3. Chinedu Quiz Game – Interactive Learning Application**

 GitHub: <https://github.com/MichaelFX-1/Quiz-Game>

 Live: <https://chineduquizgame.netlify.app/>

A browser-based quiz application built to demonstrate logic handling and interactive UI behavior.

**Key Contributions:**

- Implemented JavaScript-based question logic engine
- Designed interactive scoring and feedback system
- Built dynamic UI transitions and user response tracking
- Structured lightweight, fast-loading game architecture

**Outcome:** Functional educational game demonstrating frontend logic execution.

## 4. Kulvix Project – Web Template System

 GitHub: <https://github.com/MichaelFX-1/Project>

 Live: <https://kulvixproject.netlify.app/>

A clean and minimal business template website designed for general corporate usage.

**Key Contributions:**

Built responsive corporate landing page layout

Implemented structured service presentation system

Designed scalable UI for business adaptation

Optimized layout for fast deployment use cases

**Outcome:** Reusable corporate template structure for business web presence.

## 5. Personal Portfolio Website – Professional Identity System

 GitHub: <https://github.com/MichaelFX-1/Chinedu-Michael-Portfolio>

 Live: <https://chinedumichael.netlify.app/>

A professional portfolio system showcasing development work, experience, and technical capability.

**Key Contributions:**

Designed personal brand identity system

Built project showcase architecture

Implemented responsive multi-section layout

Structured recruiter-focused navigation flow

**Outcome:** Centralized digital identity hub for professional visibility.

## 6. Yhudee Collection – Luxury E-Commerce Concept

 GitHub: <https://github.com/MichaelFX-1/Yhudee-Empire>

 Live: <https://yhudeecollection.netlify.app/>

A luxury e-commerce platform concept focused on high-end accessories and fashion items.

**Key Contributions:**

Designed premium product display UI system

Built category-based shopping structure

Implemented luxury branding visual hierarchy

Created scalable storefront layout model

**Outcome:** High-end digital storefront simulation for luxury retail branding.

## 7. Sage Arts – Business Services Platform

 GitHub: <https://github.com/MichaelFX-1/Sage-Arts>

 Live: <https://sageartcollection.netlify.app/>

A business website for signage, framing, printing, and artistic production services.

### **Key Contributions:**

Developed service-based business architecture

Built visual-heavy product/service presentation system

Structured conversion-optimized landing flow

Designed client engagement interface for service inquiries

**Outcome:** Functional business presence platform for creative service company.

## 8. POW Portfolio Template 2 – Advanced Portfolio System

 GitHub: <https://github.com/MichaelFX-1/Portfolio-Template-2.git>

An improved iteration of the portfolio template system with refined UX structure and better layout engineering.

### **Key Contributions:**

Enhanced template modularity and structure

Improved UI consistency and layout alignment

Optimized portfolio selection experience

Strengthened scalability of template system design

**Outcome:** Refined version of portfolio-as-a-service architecture.

# **INDUSTRY EXPERIENCE & ENGAGEMENT**

## **1. Kulvix – Web Development & Tech Services Company**

**LinkedIn:** <https://www.linkedin.com/company/kulvix/>

**X(Twitter):** <https://x.com/kulvix>

Contributing to web development and digital service delivery

Engaged in collaborative software and UI projects

Exposure to production-level client systems and delivery workflows

## **2. Deliver-Now – Logistics Intelligence Platform**

 **LinkedIn:** <https://www.linkedin.com/in/jospin-uwaci-38860b98>

Contributing to development of route tracking systems across African logistics networks

Exposure to data-driven transportation infrastructure design

Experience with system thinking for operational efficiency platforms

## **3. POW (Proof of Work) – Portfolio Infrastructure Platform**

 **X(Twitter):** <https://x.com/mypowapp>

Supporting portfolio template ecosystem development

Focus on scalable identity presentation systems for developers and creatives

#### **4. PercorsoTech – Technology Academy & Services**

 Website: <https://percorsotech.com/>

 X(Twitter): <https://x.com/PercorsoTech>

 LinkedIn: <https://www.linkedin.com/company/percorsotech/>

Exposure to structured tech education and applied development workflows

Participation in web development and digital solution building processes
